## **DETAILED ACTION**

### ***Election/Restrictions***

1. This application contains claims 8-14 drawn to an invention nonelected (with traverse) in Paper filed 05/08/06. A complete reply to the final rejection must include cancellation of nonelected claims or other appropriate action (37 CFR 1.144) See MPEP § 821.01.

### ***Claim Rejections - 35 USC § 102***

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-7 and 15-17 are rejected under 35 U.S.C. 102(b) as being anticipated by Kamon et al. (U.S. patent 4,429,194).

Regarding claims 1, 6, and 15-17, Kamon teaches a method and apparatus of an earphone that comprises a speaker (21, 22, 23, 25, figure 1) and a main body (24, 30, 50, 52). As shown in figure 1, the speaker is embedded in the main body. The main body further comprises a first magnetic member and a second magnetic member (51, figure 4) as claimed (col. 3, lines 20-23 and lines 40-54 and col. 4, lines 1-13). It is inherent that there is a magnetic force between the first and second magnetic members (51), and a magnetic force between the first magnetic member and the magnetic circuit of the speaker.

Art Unit: 2615

Regarding claims 2-4 and 7, the main body further comprises a first extension body and a second extension body, and the first and second magnetic members (51) are placed on the first extension body and the second extension body, respectively (figure 4).

Regarding claim 5, the first and second magnetic members (51) are both placed on the first extension body (figure 4).

### ***Conclusion***

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Hotvet et al. (U.S. patent 4,827,525) teaches the magnetic attraction of two magnetic members that enables a user to secure and adjust the position of a probe tube in the ear canal.
